[Clinician and Parent Perspectives on educational Needs for Increasing Adolescent HPV Vaccination.](#) Journal of Cancer Education.

New HPV Vaccine Dosing GUIDELINE

Updated Guidelines for HPV Vaccine

"The Advisory Committee on Immunization Practices (ACIP) has revised its vaccination schedule for HPV vaccination among younger populations. ACIP says those starting vaccination between ages 9 and 14 can now get just two doses of HPV vaccine rather than three, with the second dose administered 6 to 12 months after the first dose."
- CDC

Read more on the [CDC's press release](#) and the American Cancer Society [Pressroom Blog](#)! The CDC's October 26 [Immunization NetConference](#), which covered the new recommendations, will be available for replay in early November.

With the updated ACIP guidelines, you may want to revisit the CDC's HPV vaccine [tip sheet](#). This tip sheet reminds providers of the proper wording for a strong recommendation and offers suggested answers to parents' questions about the HPV vaccine.

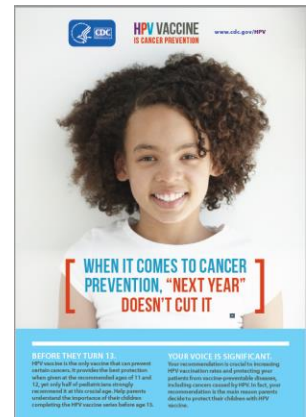

Resource SPOTLIGHT

CDC Provider Ads

The CDC has several great posters that you can use to promote strong recommendations from providers. The posters remind providers that their voice is crucial in increasing vaccine uptake rates, and that parents will listen to their recommendations.

Moonshot Report

Vice President Biden Delivers Cancer Moonshot Report; Highlights National HPV Vaccination Efforts

On October 17, 2016, Vice President Joe Biden delivered the [Cancer Moonshot Report](#) to the President and the American public. The report summarizes the work of the Cancer Moonshot Task Force since its creation in January, and lays out the Vice President's strategic plan for transforming cancer research and care.

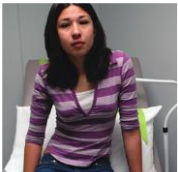

The report promotes HPV vaccination as cancer prevention:

"Under the Cancer Moonshot, the Centers for Disease Control and Prevention (CDC) is advancing its efforts to promote cancer vaccines as a safe and effective strategy for combatting various types of cancers. As part of this effort, in September CDC renewed its commitment to the National HPV Vaccination Roundtable for an additional 5 years, which will include increased state level support for this effort

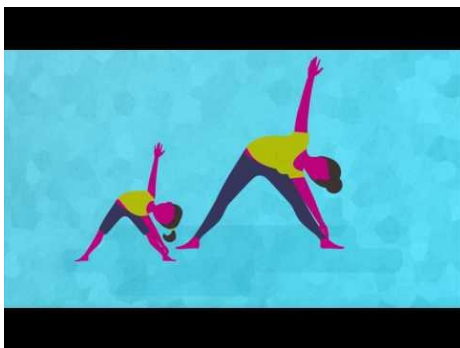

MD Anderson Answers HPV Questions

MD Anderson recently posted an article, [Your HPV Questions Answered](#), to aid in educating the public on HPV risk and prevention. The article helpfully addresses many concerns people may have about contracting HPV and their risk for cancer. Not only does the article discuss various methods for HPV screening, it also promotes vaccinating 11 and 12 year olds with the HPV vaccine as an effective prevention model.

Resource SPOTLIGHT

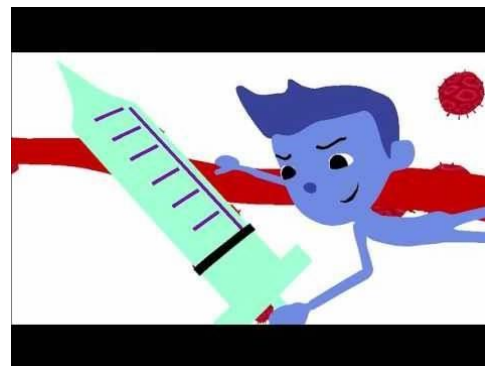

Middle School Health Toolkit

The National HPV Vaccination Roundtable released a new resource for parents and school nurses. An interactive website, www.middleschoolhealth.org provides detailed checklists and information to help parents and nurses support middle schoolers' healthy development. The HPV vaccine is seamlessly woven into the content of the website as a normal and necessary component to maintaining health during middle school. Also, check out this excellent [short video](#) that offers a brief introduction to the website.

Video Promotes Vaccinating Boys

A team from the department of Otolaryngology/HNS at LSU-Health Shreveport has created an [animated video clip](#) to promote the HPV vaccination for boys. Their hope is that this video will have a viral web presence to promote deeper understanding about the need to vaccinate boys. This video clip is searchable on YouTube and available to share through social media.

1 REVIEW
HPV vaccination coverage

SEX	HPV		HPV	HPV	HPV	HPV	HPV
	1st dose	2nd dose					
FEMALES	HPV	HPV	HPV	HPV	HPV	HPV	HPV
	%	%	%	%	%	%	%
MALES	HPV	HPV	HPV	HPV	HPV	HPV	HPV
	%	%	%	%	%	%	%

Coverage estimates are based on DQAs here and enter the Date Range and Time Period.

2 SET A GOAL
to improve HPV vaccine coverage in the next 12 months.

HPV Goal	Progress of	Progress of	Progress of	Progress of
HPV	HPV	HPV	HPV	HPV
HPV	HPV	HPV	HPV	HPV
HPV	HPV	HPV	HPV	HPV

3 RECOMMEND
HPV vaccination for adolescents, starting at age 11.

Other HPV vaccine (the same day and same way you recommend other vaccines).

Your child needs three shots today:
Meningococcal, HPV, and Tdap vaccines.
WE'LL give those at the end of the visit.

A strong recommendation from you to the main reason parents vaccinate. The vaccine provides a better vaccine response in younger adolescents, vaccinating in the previous years is best.
